

RP Fiber Power V7

a simulation and design software from
RP Photonics Consulting GmbH
www.rp-photonics.com

Version of this manual: 2018-06-19

Contents

1	General Information	6
1.1	What is “RP Fiber Power”?	6
1.2	Copyright Information and Disclaimer	6
1.3	Versions of RP Fiber Power	7
1.3.1	<i>Passive Edition</i>	7
1.3.2	<i>Version History</i>	7
1.3.3	<i>Upgrades and Updates</i>	7
1.4	Installation of RP Fiber Power	8
1.5	Technical Support	8
1.6	Documentation	9
1.7	Files belonging to RP Fiber Power	9
2	Principles of the Model	10
2.1	Basic Aspects of the Fiber; Numerical Step Sizes	10
2.1.1	<i>Longitudinal Dimension</i>	10
2.1.2	<i>Transverse Dimensions: Rings and Azimuthal Segments</i>	11
2.1.3	<i>Transverse Dimensions: Rectangular Grid</i>	12
2.2	Laser-active Ions	12
2.3	Optical Absorption and Amplification	13
2.4	Optical Channels	14
2.5	Reflections and Laser Resonators	15
2.6	Dynamic Simulations	16
2.7	The Mode Solver	18
2.8	Beam Propagation	18
2.8.1	<i>General Assumptions</i>	18
2.8.2	<i>Used Algorithm</i>	19
2.8.3	<i>Beam Propagation Devices</i>	19
2.8.4	<i>The Numerical Grid</i>	20
2.8.5	<i>The Optical Channels</i>	21
2.8.6	<i>Laser Amplification</i>	21
2.8.7	<i>Kerr Nonlinearity</i>	22
2.9	Ultrashort Pulse Propagation	22
2.9.1	<i>Initial State of the Fiber</i>	22
2.9.2	<i>Numerical Representation of an Ultrashort Pulse</i>	23
2.9.3	<i>Physical Effects Acting on the Pulses</i>	24
2.9.4	<i>The Current Pulse</i>	25
2.9.5	<i>Pulses Propagation through a Fiber</i>	25
2.9.6	<i>Pulse Properties</i>	25
2.10	General Assumptions for Power Calculations	26
3	Spectroscopic Data	27
4	The User Interface	28
4.1	Working with Forms or Scripts	28
4.2	The Working Folder	30
4.3	The Main Form	31
4.4	Working with Interactive Forms	32
4.4.1	<i>Calculating Fiber Modes</i>	33
4.4.2	<i>Beam Propagation</i>	34
4.4.3	<i>Defining the Parameters of an Active Fiber</i>	35
4.4.4	<i>Defining the Optical Channels</i>	37
4.4.5	<i>Additional Definitions</i>	38
4.4.6	<i>Defining the Graphical Output</i>	39
4.4.7	<i>Ultrashort pulses</i>	40
4.5	Custom Forms	41
4.5.1	<i>Working with Custom Forms</i>	41
4.5.2	<i>Creating Custom Forms</i>	44

4.6	The Menus	49
4.6.1	<i>The File Menu</i>	49
4.6.2	<i>The Edit Menu</i>	49
4.6.3	<i>The View Menu</i>	50
4.6.4	<i>The Execute Menu</i>	51
4.6.5	<i>The Options Menu</i>	51
4.6.6	<i>The Help Menu</i>	52
4.7	The Script Editors	52
4.8	The Debugger.....	53
4.8.1	<i>Debugging Commands</i>	54
4.8.2	<i>The Inspectors Tool</i>	57
4.8.3	<i>Debugging Expressions</i>	59
4.9	The Log Area	62
4.10	The Output Area	62
4.11	The Graphics Windows.....	63
4.12	The Beam Profile Viewer	65
4.13	The Pulse Display Window.....	68
4.14	Command Line Parameters	71
5	The Script Language of RP Fiber Power	71
5.1	General Remarks.....	71
5.2	General Rules for Scripts	71
5.3	Defining Variables, Constants and User-defined Functions	73
5.4	Definitions of Units.....	74
5.5	Performing Arithmetic Operations.....	74
5.6	Control Structures	75
5.7	Various Useful Commands	77
5.8	Keeping Results of the Previous Script Execution.....	77
5.9	Overview on the Definition of a Model	78
5.10	Definition of Fiber Parameters.....	79
5.11	Definition of Spectroscopic Data	81
5.11.1	<i>Simple Level System</i>	81
5.11.2	<i>Extended Level System</i>	83
5.11.3	<i>Rules for Spectroscopic Data Files</i>	84
5.12	Input and ASE Channels	85
5.12.1	<i>Input Channels</i>	86
5.12.2	<i>ASE Channels</i>	87
5.12.3	<i>Reflections at the Fiber Ends</i>	88
5.12.4	<i>Polarization Directions</i>	88
5.13	Localized Internal and External Losses	88
5.14	Retrieving Calculated Results	89
5.15	Modifying Model Parameters	89
5.16	Switching Between Different Devices	90
5.17	Calculation of the Noise Figure	90
5.18	Using the Mode Solver	91
5.19	Simulating Beam Propagation	94
5.20	Dynamic Simulations.....	102
5.21	Simulating Ultrashort Pulse Propagation	104
5.22	Graphical Output of Results.....	113
5.23	Display of Numerical Results	116
5.24	Output of Results to a File	116
5.25	Overview on the Arithmetics	117
5.25.1	<i>General Properties</i>	117
5.25.2	<i>Composite Expressions</i>	117
5.25.3	<i>Functions for Arithmetics</i>	118
5.25.4	<i>Arrays</i>	120
5.25.5	<i>Numerical Integration</i>	121
5.25.6	<i>Numerical Differentiation</i>	122
5.25.7	<i>Numerical Root Finding</i>	122

5.25.8	Fast Fourier Transforms (FFT).....	122
5.25.9	Control Structures	123
5.25.10	Functions for the Handling of Strings	123
5.25.11	Formatting of Numerical and String Values.....	124
5.25.12	Functions for Graphics.....	125
5.25.13	Functions for Handling Files.....	127
5.25.14	Various Other Functions	128
5.26	Reference for Model-specific Functions	129
5.26.1	Functions for Defining or Modifying the Fiber Model.....	129
5.26.2	Functions for Obtaining Calculated Results.....	131
5.26.3	Functions for the Mode Solver.....	131
5.26.4	Functions for Numerical Beam Propagation.....	133
5.26.5	Functions Used Specifically for Dynamic Simulations.....	137
5.26.6	Functions Used for Ultrashort Pulse Simulations	138
6	How to Achieve Certain Things	146
6.1	How to Get Started with RP Fiber Power	146
6.2	How to Import Spectroscopic Data	146
6.3	How to Choose Appropriate Numerical Parameters	147
6.4	How to Export Calculated Data in Text Form	148
6.5	How to Trace Errors in a Script	149
6.6	How to Model Double-clad Fiber Devices	150
6.7	How to Model Mode Locking of a Fiber Laser	150
7	Demo Files.....	151
7.1	Calculating Fiber Modes.....	151
7.2	Step-index Fibers	152
7.3	Fiber-to-Fiber Coupling	152
7.4	Modes of a Germanosilicate Fiber	152
7.5	Launching Light into a Multimode Fiber (Mode-based Simulations).....	152
7.6	Launching Light into a Single-mode Fiber (with Beam Propagation)	153
7.7	Bent Large Mode Area Fiber	153
7.8	Tapered Fiber.....	154
7.9	Fiber Coupler	154
7.10	Long-period Fiber Bragg Grating	154
7.11	Pump Absorption in a Double-clad Fiber	155
7.12	Nonlinear Self-focusing	155
7.13	Simple Ytterbium-doped Amplifier	156
7.14	Ytterbium-doped Amplifier with Calculated Mode Profiles.....	156
7.15	Multimode Fiber Amplifier.....	157
7.16	Cladding-pumped Fiber Amplifier.....	157
7.17	Cladding-pumped Fiber Amplifier, with Calculated Cladding Modes	157
7.18	Fiber Amplifier with Dip in Doping Profile.....	157
7.19	Two-stage Fiber Amplifier Models.....	158
7.20	Fiber Amplifier with ASE.....	158
7.21	Fiber Amplifier with ASE (with html Output).....	159
7.22	Fiber Amplifier for Nanosecond Pulses	159
7.23	Ytterbium-doped Fiber Laser.....	159
7.24	Ytterbium-doped Fiber Laser, Automatic Wavelength Calculation.....	160
7.25	Erbium-doped Fiber Amplifier with ASE.....	160
7.26	Erbium-doped Fiber Amplifier with Quenching	160
7.27	Erbium-doped Fiber Amplifier with Pair-induced Quenching.....	160
7.28	Erbium-doped Fiber Amplifier for Multiple Signals	161
7.29	Erbium-ytterbium-doped Fiber Laser	161
7.30	Thulium-doped Upconversion Fiber Laser	161
7.31	Dynamic Amplifier Simulation.....	162
7.32	Gain-switched Fiber Laser	162
7.33	ASE Source with Automatic Spectral Optimization	162
7.34	Actively Q-switched Fiber Laser	163

7.35 Passively Q-switched Fiber Laser	163
7.36 Actively Q-switched Nd:YAG Laser	163
7.37 Actively Q-switched Nd:YAG Laser, with Beam Propagation.....	164
7.38 Passively Q-switched Nd:YAG Laser	164
7.39 Higher-order Soliton Pulses	165
7.40 Soliton Self-Frequency Shift.....	166
7.41 Parabolic Pulses in an Ytterbium-doped Fiber Amplifier	166
7.42 Stimulated Raman Scattering in Yb-doped Fiber Amplifier	167
7.43 Raman Amplification in Multimode Fiber	167
7.44 Nonlinear Loop Mirror.....	167
7.45 Regenerative Amplifier	168
7.46 Mode-locked Fiber Lasers	169
7.47 Chirped-pulse Amplifier System.....	169
7.48 Soliton Self-frequency Shift.....	170
7.49 Raman Amplifier for Picosecond Pulses.....	170
7.50 Supercontinuum Generation	170
7.51 Supercontinuum Generation with Nanosecond Pulses.....	171
7.52 Transmission of Telecom Signal.....	171
7.53 Fiber Amplifier with ASE, Output to html File	172
